

Anaheim Custom Extruders Delivers Quality Every Time

Our specialty? Custom thermo-plastic extrusions, made to customer specifications. Always manufactured to close tolerances. Monitored with tight quality control. Delivered on time. Guaranteed to be right.

Anaheim Custom Extruders produces tubes, rods and profiles. From simple shapes to complex. In quantities for prototypes to large production runs. From more than twenty engineering and commodity resins. In sizes from 1/32" in polycarbonate to 10" profiles in PVC. Finishing too, as described in the capabilities overview section on the back page.

Made the way you want it.

We guarantee a quality product, held to the exacting tolerances you specify. We welcome the opportunity to tackle your most challenging jobs — intricate shapes, thin walls, many-sided shapes, exotic materials, even "impossible" extrusions.

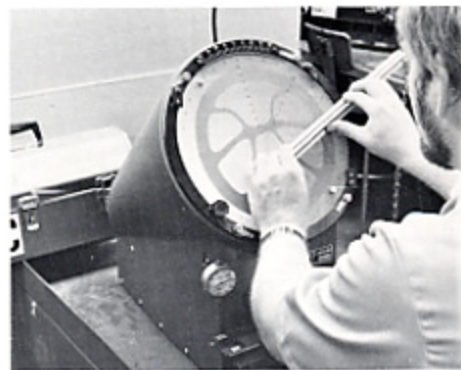

You'll find we're flexible. In addition to turning out critical, tough-to-run parts, we are very price-competitive on all kinds of plastic extrusions.

Proof of performance.

By turning out quality every time, we've attracted and retained customers from all over the United States. Our customers range in size from small and start-up organizations to members of the exclusive Fortune 500. We're pleased to report that we've kept most of our very first customers and our business comes heavily from repeats and referrals.

By helping our customers succeed, we've also succeeded. Our manufacturing space has more than tripled since we started in 1977. As

further evidence that ours is a solid, well-managed company, Anaheim Custom Extruders has earned a place in *INC.* magazine's list of the "Inc. 500" growth companies.

Quality people make the difference.

Our record of growth through customer satisfaction is due, to a great extent, to our people. After all, almost everyone in our industry uses similar equipment.

We know we have the best people in the business in terms of skill, enthusiasm and pride. We feel we make better use of our people than our competition. A typical extrusion company has one operator per machine, plus a foreman for every ten machines. For us that's just not enough to deliver quality every time.

Anaheim Custom Extruders has two people per machine — a machine operator and a downstream operator. This way, there's another set of eyes to pinpoint potential problems and another set of hands to do things right, and there's a foreman for every four machines to keep close watch on production.

Our system makes it possible for our people to do their most accurate work. As a result, we attract the best people. We back them with special incentive programs designed to keep rejects low and quality high.

We take extraordinary steps to do things right.

Quality is an integral part of our procedure, from original customer contact. When our salesman brings in an order, there's a detailed consultation with manufacturing management and quality control before the job is begun. After specifications are mutually approved and documented, a set-up sheet is generated to serve as the "blueprint" for a successful job now and consistently repeatable results on future re-runs.

As the job progresses, there is a triple-tiered inspection process that includes the operator's constant checking, inspection by shift foreman, as well as (or in addition to) formal quality control. With more people per machine, we devote more time and attention to on-going quality assurance.

We take great pride in the finished product and from what we've heard from the QC teams from major corporations when they tour our facilities. They comment that our quality and on-line documentation is the best they've seen at any extrusion shop. Of course, your inspection team is invited to tour our facilities.

Parts that compliment your product.

Anaheim Custom Extruders produces exacting parts with superb character. Particularly exciting are crystal clear parts that are optically perfect. Critical extrusions are held to close dimensional tolerances, including cut length. We can work to MIL specifications with material traceable to lot.

Quality extends to packaging; yet another example of the special touches provided when you deal with us. Your parts are packaged neatly into shipping containers, and a QC procedure assures that your items are packed to the same quality as they were manufactured. As a measure of pride in his performance the operator "signs" his or her work with a stamp bearing his name.

We welcome your comments.

When we've done a great job, tell us. It gives everyone here a big lift. And let us know if you have a problem, no matter how minor. If the part isn't right in dimension, quality or color, tell us. Because if we don't perform properly the first time, we'll make things right with you. You have the ACE guarantee!

Count on us to deliver quality every time. On time, too. Lead time depends upon workload and backlog, but we'll go out of our way to handle your special circumstances and meet your pressing needs . . . even if it means breaking into a job less pressing time wise. High efficiency helps us meet delivery commitments. So does having material on hand. We stock many resins and colors at our plant and adjacent warehouse. We'll gladly work with customer-supplied materials — and we will certify materials on request.

An edge in quality and delivery is provided by a capable in-house machine shop. Our tool designers can handle extremely intricate shapes and are readily available to fine-tune tooling. Our machinists are always on hand to make quick repairs to production equipment thereby minimizing lost production time.

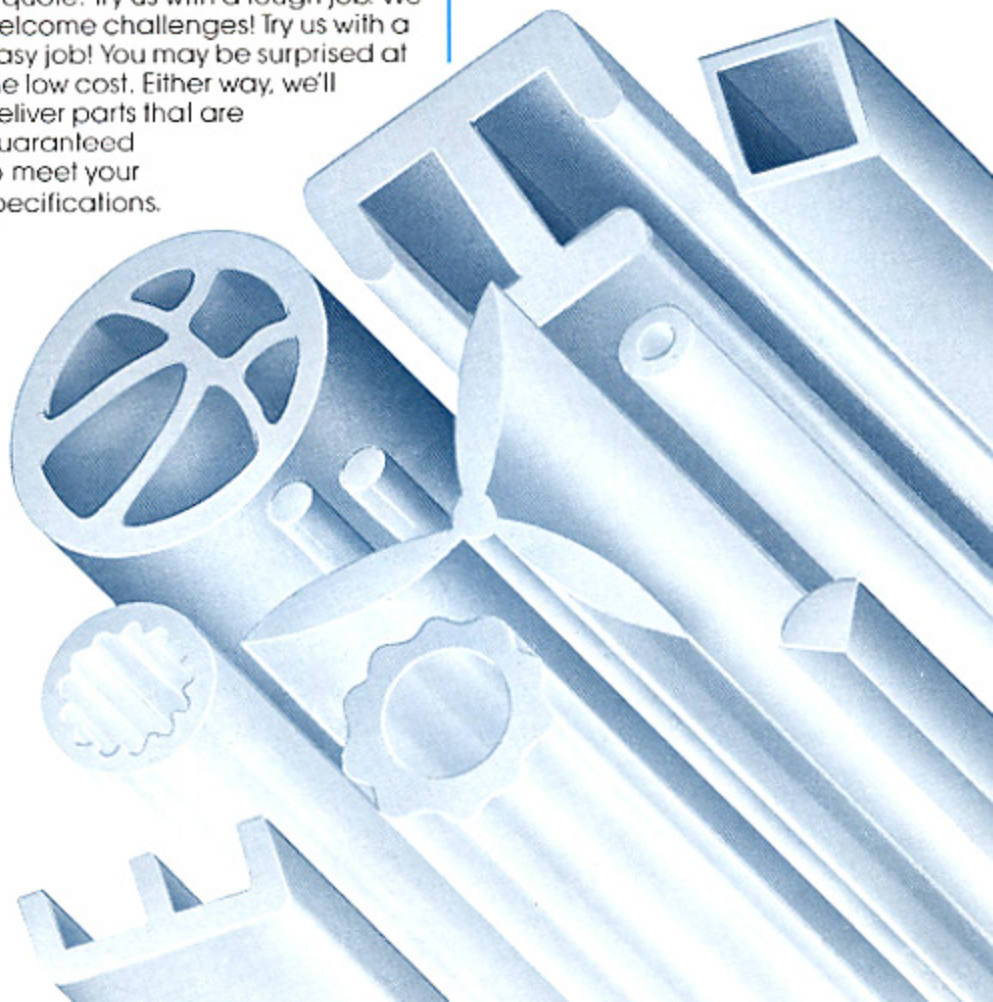

We can help you!

Anaheim Custom Extruders offers a free quotation service and stands ready to answer any technical questions on extrusions. We cater to our customers even to the extent of selling machine time so you can evaluate your products, tooling and material.

Give us an opportunity to bid on your next job. Send a print or sample, with material specification — and quantity — and we'll send you a quote. Try us with a tough job. We welcome challenges! Try us with a easy job! You may be surprised at the low cost. Either way, we'll deliver parts that are guaranteed to meet your specifications.

We know that you'll not only like working with us but you'll also appreciate the fact that we're priced competitively on all your extrusion and fabrication needs.
